

Six reasons why EL-MAX 1.5 is a good choice

Nutrunner - in a nutshell

It's easy to understand how EL-MAX impact wrenches became a valued tool in many of Europe's tyre workshops.

It makes the strenuous work associated with heavy vehicle wheels so much easier, quieter and simpler. Anyone who hasn't yet discovered that the actual work of loosening the most rusted-on wheel nuts can be comfortable and uncomplicated obviously hasn't tried EL-MAX Nutrunner.

With safe and quiet electrical operation as part of a carefully considered design, it's a machine for superior function and user-friendliness.

There's no nut that it can't move, and no user that would exchange his EL-MAX Nutrunner for something else.

No more sore backs, knees or hands

EL-MAX Nutrunner gives you a natural working position, and at the same time all heavy torque is eliminated. Compared with air-driven alternatives, EL-MAX is a quiet, vibration-free machine that gives you the ideal working environment.

Our customers are full of praise:

"We only use strong brands in our work, and EL-MAX is extremely good - an excellent product. None of the machines we have sold over the years have been returned for repairs."

Thomas Nummelin
Continova AB, Sweden

"It's been a real pleasure to recommend and sell EL-MAX machines, as every single demonstration we've done has been a resounding success."

Gunnar Helsner
Volvo Lastvagnar AB, Sweden

1. Easy-to-use

EL-MAX is not afraid of any tough jobs. It is still one of the most well-balanced, functional and easy-to-handle impact wrenches available. It spares you the toughest parts of the job, while you control its work through a few simple operations.

2. Ergonomic

EL-MAX stands for ergonomics with an entirely vibration-free action. The sound level is pleasingly low. All controls are easily accessible so work is rapid and effective. You can use one hand to adjust the working height, while the other controls the tool operation. That means you can get maximum performance with minimum physical stress.

3. Economic

It ought to be obvious that a machine should be as worry-free to own as it is to use. It should not cost you any extra to service or repair either. We think that signifies quality. Together, this guarantees excellent, stoppage-free total economy, year after year.

4. Strong

An ingenious mechanism with flywheels transfers all the power to the tool in an instant. Fixed impact values provide continuously increasing torque, and you always know how much force is being applied for each impact. In trials to measure maximum capacity, EL-MAX has achieved higher torque values than can be registered by the measurement equipment.

5. Flexible

Universal joints and replaceable sockets mean EL-MAX can tackle all types of heavy vehicle wheel, regardless of the type of nut. Standard sockets are available in dimensions from 17 to 46 mm. For special purposes there is a plentiful selection of special sockets.

6. Operational reliability

EL-MAX Nutrunner is as good as maintenance-free - a strong and reliable partner. All in all, electrical power makes it both quiet and reliable. A minimal service requirement contributes to high efficiency and function.

A user's dream?

EL-MAX unites a comfortable working position with raw strength. All torques are checked at an easy working height without vibrations, making EL-MAX the natural choice for a good working environment.

EL-MAX impact wrenches are based on tried and tested technology. They are based on the same principles as were used when the first model came out in the 1950s. It was mechanics that did more than just prove its effectiveness and practicality. In terms of finance, too, EL-MAX has proved to have a hard-to-beat service life, as it goes on almost indestructibly from year to year. With obviously satisfied users.

These are just a couple of the reasons why EL-MAX Nutrunner is a user's dream and the natural choice in every workshop.

EL-MAX Nutrunner all over Europe

Most EL-MAX users are to be found in 19 European countries. But EL-MAX machines are in use in several other parts of world, from Japan in the east to Canada in the west.

Safe, long-term relationships

"With 30 years' experience of using EL-MAX Nutrunner, we can confirm that it's an extremely high-quality machine with a long service life."

Einar Tveter
Rodin & Co, Norway

"It's a machine that we like a lot here, and it's got a good reputation throughout Finland. Attempts have been made to copy it, but those machines have never been as good quality or as durable as EL-MAX."

Anders Öblom
Eurovulk, Finland
